

# 74HC40103

## 8-bit synchronous binary down counter

Rev. 03 — 12 November 2004

Product data sheet

### 1. General description

The 74HC40103 is a high-speed Si-gate CMOS device and are pin compatible with the 40103 of the 4000B series. The 74HC40103 is specified in compliance with JEDEC standard no. 7A.

The 74HC40103 consists of an 8-bit synchronous down counter with a single output which is active when the internal count is zero. The 74HC40103 contains a single 8-bit binary counter and has control inputs for enabling or disabling the clock (CP), for clearing the counter to its maximum count and for presetting the counter either synchronously or asynchronously. All control inputs and the terminal count output ( $\overline{TC}$ ) are active-LOW logic.

In normal operation, the counter is decremented by one count on each positive-going transition of the clock (CP). Counting is inhibited when the terminal enable input ( $\overline{TE}$ ) is HIGH. The terminal count output ( $\overline{TC}$ ) goes LOW when the count reaches zero if  $\overline{TE}$  is LOW, and remains LOW for one full clock period.

When the synchronous preset enable input ( $\overline{PE}$ ) is LOW, data at the jam input (P0 to P7) is clocked into the counter on the next positive-going clock transition regardless of the state of  $\overline{TE}$ . When the asynchronous preset enable input ( $\overline{PL}$ ) is LOW, data at the jam input (P0 to P7) is asynchronously forced into the counter regardless of the state of  $\overline{PE}$ ,  $\overline{TE}$ , or CP. The jam inputs (P0 to P7) represent a single 8-bit binary word.

When the master reset input ( $\overline{MR}$ ) is LOW, the counter is asynchronously cleared to its maximum count (decimal 255) regardless of the state of any other input.

If all control inputs except  $\overline{TE}$  are HIGH at the time of zero count, the counters will jump to the maximum count, giving a counting sequence of 256 clock pulses long.

The 74HC40103 may be cascaded using the  $\overline{TE}$  input and the  $\overline{TC}$  output, in either a synchronous or ripple mode.

# PHILIPS

## 2. Features

- Cascadable
- Synchronous or asynchronous preset
- Low-power dissipation
- Complies with JEDEC standard no. 7A
- ESD protection:
  - ◆ HBM EIA/JESD22-A114-B exceeds 2000 V
  - ◆ MM EIA/JESD22-A115-A exceeds 200 V.
- Multiple package options
- Specified from  $-40\text{ }^{\circ}\text{C}$  to  $+80\text{ }^{\circ}\text{C}$  and from  $-40\text{ }^{\circ}\text{C}$  to  $+125\text{ }^{\circ}\text{C}$ .

## 3. Applications

- Divide-by-n counters
- Programmable timers
- Interrupt timers
- Cycle/program counters.

## 4. Quick reference data

**Table 1: Quick reference data**

$GND = 0\text{ V}$ ;  $T_{amb} = 25\text{ }^{\circ}\text{C}$ ;  $t_r = t_f = 6\text{ ns}$ .

| Symbol                | Parameter                               | Conditions                                      | Min                   | Typ | Max | Unit |
|-----------------------|-----------------------------------------|-------------------------------------------------|-----------------------|-----|-----|------|
| $t_{PHL}$ , $t_{PLH}$ | propagation delay CP to $\overline{TC}$ | $C_L = 15\text{ pF}$ ;<br>$V_{CC} = 5\text{ V}$ | -                     | 30  | -   | ns   |
| $f_{max}$             | maximum clock frequency                 | $C_L = 15\text{ pF}$ ;<br>$V_{CC} = 5\text{ V}$ | -                     | 32  | -   | MHz  |
| $C_I$                 | input capacitance                       |                                                 | -                     | 3.5 | -   | pF   |
| $C_{PD}$              | power dissipation capacitance           | $V_I = GND$ to $V_{CC}$                         | <a href="#">[1]</a> - | 24  | -   | pF   |

[1]  $C_{PD}$  is used to determine the dynamic power dissipation ( $P_D$  in  $\mu\text{W}$ ).

$P_D = C_{PD} \times V_{CC}^2 \times f_i \times N + \sum(C_L \times V_{CC}^2 \times f_o)$  where:

$f_i$  = input frequency in MHz;

$f_o$  = output frequency in MHz;

$C_L$  = output load capacitance in pF;

$V_{CC}$  = supply voltage in V;

$N$  = number of inputs switching;

$\sum(C_L \times V_{CC}^2 \times f_o)$  = sum of outputs.

5. Ordering information

Table 2: Ordering information

| Type number | Package           |         |                                                                        |          |
|-------------|-------------------|---------|------------------------------------------------------------------------|----------|
|             | Temperature range | Name    | Description                                                            | Version  |
| 74HC40103N  | −40 °C to +125 °C | DIP16   | plastic dual in-line package; 16 leads (300 mil)                       | SOT38-4  |
| 74HC40103D  | −40 °C to +125 °C | SO16    | plastic small outline package; 16 leads; body width 3.9 mm             | SOT109-1 |
| 74HC40103DB | −40 °C to +125 °C | SSOP16  | plastic shrink small outline package; 16 leads; body width 5.3 mm      | SOT338-1 |
| 74HC40103PW | −40 °C to +125 °C | TSSOP16 | plastic thin shrink small outline package; 16 leads; body width 4.4 mm | SOT403-1 |

| PE     | 15  | synchronous preset enable input (active LOW)  |
| VCC    | 16  | positive supply voltage                       |

## 8. Functional description

### 8.1 Function table

Table 4: Function table <sup>[1]</sup>

| Control inputs |    |    |    | Preset mode  | Action <sup>[2]</sup>                       |
|----------------|----|----|----|--------------|---------------------------------------------|
| MR             | PL | PE | TE |              |                                             |
| L              | X  | X  | X  | asynchronous | clear to maximum count                      |
| H              | L  | X  | X  | asynchronous | preset asynchronously                       |
|                | H  | L  | X  | synchronous  | preset on next LOW-to HIGH clock transition |
|                |    | H  | L  | synchronous  | count down                                  |
|                |    |    | H  | synchronous  | inhibit counter                             |

[1] H = HIGH voltage level;  
L = LOW voltage level;  
X = don't care.

[2] Clock connected to CP.  
Synchronous operation: changes occur on the LOW-to-HIGH CP transition.  
Jam inputs: MSD = P7, LSD = P0.

## 9. Limiting values

Table 5: Limiting values

In accordance with the Absolute Maximum Rating System (IEC 60134). Voltages are referenced to GND (ground = 0 V).

| Symbol                             | Parameter                         | Conditions                                                             | Min              | Max  | Unit |
|------------------------------------|-----------------------------------|------------------------------------------------------------------------|------------------|------|------|
| V <sub>CC</sub>                    | supply voltage                    |                                                                        | -0.5             | +7   | V    |

| I <sub>OK</sub>                    | output diode current              | V <sub>O</sub> < -0.5 V or<br>V <sub>O</sub> > V <sub>CC</sub> + 0.5 V | -                | ±20  | mA   |
| I <sub>O</sub>                     | output source or sink current     | V <sub>O</sub> = -0.5 V to V <sub>CC</sub> + 0.5 V                     | -                | ±25  | mA   |
| I <sub>CC</sub> , I <sub>GND</sub> | V <sub>CC</sub> or GND current    |                                                                        | -                | ±50  | mA   |
| T <sub>stg</sub>                   | storage temperature               |                                                                        | -65              | +150 | °C   |
| P <sub>tot</sub>                   | power dissipation                 |                                                                        |                  |      |      |
|                                    | DIP16 package                     |                                                                        | <sup>[1]</sup> - | 750  | mW   |
|                                    | SO16, SSOP16 and TSSOP16 packages |                                                                        | <sup>[2]</sup> - | 500  | mW   |

[1] Above 70 °C: P<sub>tot</sub> derates linearly with 12 mW/K.

[2] Above 70 °C: P<sub>tot</sub> derates linearly with 8 mW/K.

## 10. Recommended operating conditions

Table 6: Recommended operating conditions

| Symbol     | Parameter                 | Conditions              | Min | Typ | Max      | Unit |
|------------|---------------------------|-------------------------|-----|-----|----------|------|
| $V_{CC}$   | supply voltage            |                         | 2.0 | 5.0 | 6.0      | V    |
| $V_I$      | input voltage             |                         | 0   | -   | $V_{CC}$ | V    |
| $V_O$      | output voltage            |                         | 0   | -   | $V_{CC}$ | V    |
| $t_r, t_f$ | input rise and fall times | $V_{CC} = 2.0\text{ V}$ | -   | -   | 1000     | ns   |
|            |                           | $V_{CC} = 4.5\text{ V}$ | -   | 6.0 | 500      | ns   |
|            |                           | $V_{CC} = 6.0\text{ V}$ | -   | -   | 400      | ns   |
| $T_{amb}$  | ambient temperature       |                         | -40 | -   | +125     | °C   |

## 11. Static characteristics

Table 7: Static characteristics

At recommended operating conditions; voltages are referenced to GND (ground = 0 V).

| Symbol                   | Parameter                 | Conditions                                                       | Min  | Typ  | Max       | Unit          |
|--------------------------|---------------------------|------------------------------------------------------------------|------|------|-----------|---------------|
| $T_{amb} = 25\text{ °C}$ |                           |                                                                  |      |      |           |               |
| $V_{IH}$                 | HIGH-level input voltage  | $V_{CC} = 2.0\text{ V}$                                          | 1.5  | 1.2  | -         | V             |
|                          |                           | $V_{CC} = 4.5\text{ V}$                                          | 3.15 | 2.4  | -         | V             |

| $f_{max}$ | maximum clock frequency           | see <a href="#">Figure 7</a>  |     |     |     |      |
|           |                                   | $V_{CC} = 2.0\text{ V}$       | 2.0 | -   | -   | MHz  |
|           |                                   | $V_{CC} = 4.5\text{ V}$       | 10  | -   | -   | MHz  |
|           |                                   | $V_{CC} = 6.0\text{ V}$       | 12  | -   | -   | MHz  |

[1]  $C_{PD}$  is used to determine the dynamic power dissipation ( $P_D$  in  $\mu\text{W}$ ).

$P_D = C_{PD} \times V_{CC}^2 \times f_i \times N + \sum(C_L \times V_{CC}^2 \times f_o)$  where:

$f_i$  = input frequency in MHz;

$f_o$  = output frequency in MHz;

$C_L$  = output load capacitance in pF;

$V_{CC}$  = supply voltage in V;

$N$  = number of inputs switching;

$\sum(C_L \times V_{CC}^2 \times f_o)$  = sum of outputs.

13. Waveforms

The shaded areas indicate when the input is permitted to change for predictable output performance.  
 $V_M = 0.5 \times V_I$ .

Fig 11. Waveforms showing hold and set-up times for Pn,  $\overline{PE}$  to CP

$V_M = 0.5 \times V_I$ .

Fig 12. Waveforms showing hold and set-up times for  $\overline{MR}$  or  $\overline{PE}$  to CP

Test data is given in [Table 9](#).  
Definitions for test circuit:  
 $R_T$  = Termination resistance should be equal to output impedance  $Z_o$  of the pulse generator.  
 $C_L$  = Load capacitance including jig and probe capacitance.

Fig 13. Load circuitry for switching times

Table 9: Test data

| Supply   | Input    |            | Load  |
|----------|----------|------------|-------|
| $V_{CC}$ | $V_I$    | $t_r, t_f$ | $C_L$ |
| 2.0 V    | $V_{CC}$ | 6 ns       | 50 pF |
| 4.5 V    | $V_{CC}$ | 6 ns       | 50 pF |
| 6.0 V    | $V_{CC}$ | 6 ns       | 50 pF |
| 5.0 V    | $V_{CC}$ | 6 ns       | 15 pF |

## 17. Data sheet status

| Level | Data sheet status <sup>[1]</sup> | Product status <sup>[2] [3]</sup> | Definition                                                                                                                                                                                                                                                                                     |
|-------|----------------------------------|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| I     | Objective data                   | Development                       | This data sheet contains data from the objective specification for product development. Philips Semiconductors reserves the right to change the specification in any manner without notice.                                                                                                    |
| II    | Preliminary data                 | Qualification                     | This data sheet contains data from the preliminary specification. Supplementary data will be published at a later date. Philips Semiconductors reserves the right to change the specification without notice, in order to improve the design and supply the best possible product.             |
| III   | Product data                     | Production                        | This data sheet contains data from the product specification. Philips Semiconductors reserves the right to make changes at any time in order to improve the design, manufacturing and supply. Relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN). |

[1] Please consult the most recently issued data sheet before initiating or completing a design.

[2] The product status of the device(s) described in this data sheet may have changed since this data sheet was published. The latest information is available on the Internet at URL <http://www.semiconductors.philips.com>.

[3] For data sheets describing multiple type numbers, the highest-level product status determines the data sheet status.

## 18. Definitions

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

**Limiting values definition** — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## 19. Disclaimers

**Life support** — These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

**Right to make changes** — Philips Semiconductors reserves the right to make changes in the products - including circuits, standard cells, and/or software - described or contained herein in order to improve design and/or performance. When the product is in full production (status 'Production'), relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN). Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.

## О компании

ООО "ТрейдЭлектроникс" - это оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов. Реализуемая нашей компанией продукция насчитывает более полумиллиона наименований.

Благодаря этому наша компания предлагает к поставке практически не ограниченный ассортимент компонентов как оптовыми, мелкооптовыми партиями, так и в розницу.

Наличие собственной эффективной системы логистики обеспечивает надежную поставку продукции по конкурентным ценам в точно указанные сроки.

Срок поставки со стоков в **Европе и Америке – от 3 до 14 дней.**

Срок поставки из **Азии – от 10 дней.**

Благодаря развитой сети поставщиков, помогаем в поиске и приобретении экзотичных или снятых с производства компонентов.

Предоставляем спец цены на элементы для создания инженерных сэмплов.

**Упорный труд, качественный результат дают нам право быть уверенными в себе и надежными для наших клиентов.**

### Наша компания это:

- Гарантия качества поставляемой продукции
- Широкий ассортимент
- Минимальные сроки поставок
- Техническая поддержка
- Подбор комплектации
- Индивидуальный подход
- Гибкое ценообразование

Наша организация особенно сильна в поставках модулей, микросхем, пассивных компонентов, ксайленсах (XC), EPF, EPM и силовой электроники.

Большой выбор предлагаемой продукции, различные виды оплаты и доставки, позволят Вам сэкономить время и получить максимум выгоды от сотрудничества с нами!

## Перечень производителей, продукцию которых мы поставляем на российский рынок

Trade Electronics.ru

гарантия бесперебойности производства и  
качества выпускаемой продукции

С удовольствием будем прорабатывать для Вас поставки всех необходимых компонентов по текущим запросам для скорейшего выявления групп элементов, по которым сотрудничество именно с нашей компанией будет для Вас максимально выгодным!

С уважением,

Менеджер отдела продаж ООО

«Трейд Электроникс»

Шишлаков Евгений
