DESCRIPTION

The SY100EL1003 is a high speed current source for driving a semiconductor laser diode in optical transmission applications. The output current modulation is DC – voltage controlled. The modulation current is disabled when output enable is HIGH.

The device incorporates complementary open collector outputs with a capability of driving peak current of 75mA. The laser driver current is adjustable by selection of RSET. The resistor REXT must be placed between $\overline{\text{OUT}}$ and VCC to dissipate the worst case power. RSER is recommended to fix laser diode matching issues.

The SY100EL1003 utilizes the high performance bipolar ASSET technology.
