

## 100393

### Low Power 9-Bit ECL-to-TTL Translator with Latches

#### General Description

The 100393 is a 9-bit translator for converting F100K logic levels to TTL logic levels. A LOW on the latch enable (LE) latches the data at the input state. A HIGH on the LE makes the latches transparent. A HIGH on either the ECL or TTL output enable (OE ECL or OE TTL), holds the outputs in a high impedance state.

The 100393 is designed with TTL, 64 mA outputs for Bus Driving capability. All ECL inputs have 50 kΩ pull-down resistors. When the inputs are either unconnected or at the same potential, the outputs will go LOW.

#### Features

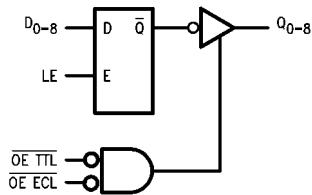

- 64 mA  $I_{OL}$  drive capability
- 2000V ESD protection
- -4.2V to -5.7V operating range
- Latched outputs
- TTL outputs

#### Ordering Code:

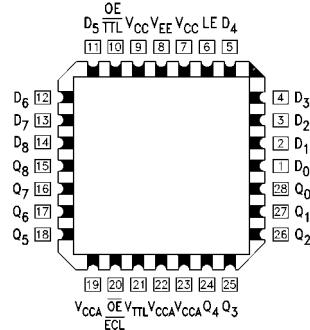

Order Number	Package Number	Package Description
100393QC	V28A	28-Lead Plastic Lead Chip Carrier (PLCC), JEDEC MO-047, 0.450 Square

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

**Note 1:** The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**Note 2:** ESD testing conforms to MIL-STD-883, Method 3015.

**Note 3:** The specified limits represent the "worst case" value for the parameter. Since these "worst case" values normally occur at the temperature extremes, additional noise immunity and guard banding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.
