

### FEATURES

**Wideband switch:  $-3$  dB @ 4 GHz**  
**Absorptive/reflective switches**  
**High off isolation (43 dB @ 1 GHz)**  
**Low insertion loss (0.8 dB @ 1 GHz)**  
**Single 1.65 V to 2.75 V power supply**  
**CMOS/LVTTL control logic**  
**8-lead MSOP and tiny 3 mm  $\times$  3 mm LFCSP packages**  
**Low power consumption ( $<1$   $\mu$ A)**

### APPLICATIONS

**Wireless communications**  
**General-purpose RF switching**  
**Dual-band applications**  
**High speed filter selection**  
**Digital transceiver front end switch**  
**IF switching**  
**Tuner modules**  
**Antenna diversity switching**

### GENERAL DESCRIPTION

The ADG918/ADG919 are wideband switches using a CMOS process to provide high isolation and low insertion loss to 1 GHz. The ADG918 is an absorptive (matched) switch having 50  $\Omega$  terminated shunt legs, whereas the ADG919 is a reflective switch. These devices are designed such that the isolation is high over the dc to 1 GHz frequency range. They have on-board CMOS control logic, thus eliminating the need for external controlling circuitry. The control inputs are both CMOS and

### FUNCTIONAL BLOCK DIAGRAMS

LVTTL compatible. The low power consumption of these CMOS devices makes them ideally suited to wireless and general-purpose high frequency switching applications.

### PRODUCT HIGHLIGHTS

1.  $-43$  dB off isolation @ 1 GHz.
2. 0.8 dB insertion loss @ 1 GHz.
3. Tiny 8-lead MSOP/LFCSP packages.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### ESD CAUTION

#### **ESD (electrostatic discharge) sensitive device.**

Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## TERMINOLOGY

**V<sub>DD</sub>**

Most positive power supply potential.

**I<sub>DD</sub>**

Positive supply current.

**GND**

Ground (0 V) reference.

**CTRL**

Logic control input.

**V<sub>INL</sub>**

Maximum input voltage for Logic 0.

**V<sub>INH</sub>**

Minimum input voltage for Logic 1.

**I<sub>INL</sub> (I<sub>INH</sub>)**

Input current of the digital input.

**C<sub>IN</sub>**

Digital input capacitance.

**t<sub>ON</sub>**

Delay between applying the digital control input and the output switching on.

**t<sub>OFF</sub>**

Delay between applying the digital control input and the output switching off.

**t<sub>RISE</sub>**

Rise time; time for the RF signal to rise from 10% to 90% of the on level.

**t<sub>FALL</sub>**

Fall time; time for the RF signal to fall from 90% to 10% of the on level.

### Off Isolation

The attenuation between the input and output ports of the switch when the switch control voltage is in the off condition.

### Insertion Loss

The attenuation between the input and output ports of the switch when the switch control voltage is in the on condition.

**P<sub>-1 dB</sub>**

1 dB compression point. The RF input power level at which the switch insertion loss increases by 1 dB over its low level value. It is a measure of how much power the on switch can handle before the insertion loss increases by 1 dB.

**IP<sub>3</sub>**

Third order intermodulation intercept. This is a measure of the power in false tones that occur when closely spaced tones are passed through a switch, whereby the nonlinearity of the switch causes these false tones to be generated.

### Return Loss

The amount of reflected power relative to the incident power at a port. Large return loss indicates good matching. By measuring return loss, the VSWR (voltage standing wave ratio) can be calculated from conversion charts. VSWR indicates the degree of matching present at a switch RF port.

### Video Feedthrough

Spurious signals present at the RF ports of the switch when the control voltage is switched from high to low or low to high without an RF signal present.

## TEST CIRCUITS

Setups for the ADG918 are similar.

## APPLICATIONS INFORMATION

The ADG918/ADG919 are ideal solutions for low power, high frequency applications. The low insertion loss, high isolation between ports, low distortion, and low current consumption of these parts make them excellent solutions for many high frequency switching applications. The most obvious application is in a transmit/receive block, as shown in the wireless metering block diagram in Figure 26.

Other applications include switching between high frequency filters, an ASK generator, an FSK generator, and an antenna diversity switch in many tuner modules.

### ABSORPTIVE VS. REFLECTIVE SWITCH

The ADG918 is an absorptive (matched) switch with  $50\ \Omega$  terminated shunt legs, and the ADG919 is a reflective switch with  $0\ \Omega$  terminated shunts to ground. The ADG918 absorptive switch has a good VSWR on each port, regardless of the switch mode. An absorptive switch should be used when there is a need for a good VSWR that is looking into the port but not passing the through signal to the common port. The ADG918 is therefore ideal for applications that require minimum reflections back to the RF source. It also ensures that the maximum power is transferred to the load.

The ADG919 reflective switch is suitable for applications where high off port VSWR does not matter and the switch has some other desired performance feature. It can be used in many applications, including high speed filter selection. In most cases, an absorptive switch can be used instead of a reflective switch, but not vice versa.

### WIRELESS METERING

The ADG918 can be used in wireless metering applications. It can be used in conjunction with the ADF7020 transceiver IC for

a utility metering transceiver application, providing the required isolation between the transmit and receive signals. The SPDT configuration isolates the high frequency receive signal from the high frequency transmit.

Figure 26. Wireless Metering

### TUNER MODULES

The ADG918 can be used in a tuner module to switch between the cable TV input and the off-air antenna. This part is also ideal for use as an antenna diversity switch, switching different antenna to the tuner.

Figure 27. Tuner Modules

### FILTER SELECTION

The ADG919 can be used as a 2:1 demultiplex to switch high frequency signals between different filters and also to multiplex the signal to the output.

Figure 28. Filter Selection

## ADG9xx EVALUATION BOARD

The ADG9xx evaluation board allows designers to evaluate the high performance wideband switches with a minimum of effort.

In addition to the evaluation board, the user requires only a power supply and a network analyzer. An application note is available with the evaluation board and gives complete information about operating the evaluation board.

The RFC port (see Figure 29) is connected through a  $50\ \Omega$  transmission line to the top left SMA connector J1. RF1 and RF2 are connected through  $50\ \Omega$  transmission lines to the top two SMA connectors, J2 and J3 respectively. A through transmission line connects J4 and J5 and is used to estimate the loss of the PCB over the environmental conditions being evaluated.

The board is constructed of a 4-layer, FR4 material with a dielectric constant of 4.3 and an overall thickness of 0.062 inches. Two ground layers with grounded planes provide ground for the RF transmission lines. The transmission lines were designed using a coplanar waveguide with ground plane model using a trace width of 0.052 inches, a clearance to ground plane of 0.030 inches, a dielectric thickness of 0.029 inches, and a metal thickness of 0.014 inches.

## О компании

ООО "ТрейдЭлектроникс" - это оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов. Реализуемая нашей компанией продукция насчитывает более полумиллиона наименований.

Благодаря этому наша компания предлагает к поставке практически не ограниченный ассортимент компонентов как оптовыми, мелкооптовыми партиями, так и в розницу.

Наличие собственной эффективной системы логистики обеспечивает надежную поставку продукции по конкурентным ценам в точно указанные сроки.

Срок поставки со стоков в **Европе и Америке – от 3 до 14 дней.**

Срок поставки из **Азии – от 10 дней.**

Благодаря развитой сети поставщиков, помогаем в поиске и приобретении экзотичных или снятых с производства компонентов.

Предоставляем спец цены на элементы для создания инженерных сэмплов.

**Упорный труд, качественный результат дают нам право быть уверенными в себе и надежными для наших клиентов.**

### **Наша компания это:**

- Гарантия качества поставляемой продукции
- Широкий ассортимент
- Минимальные сроки поставок
- Техническая поддержка
- Подбор комплектации
- Индивидуальный подход
- Гибкое ценообразование

Наша организация особенно сильна в поставках модулей, микросхем, пассивных компонентов, ксайленсах (XC), EPF, EPM и силовой электроники.

Большой выбор предлагаемой продукции, различные виды оплаты и доставки, позволят Вам сэкономить время и получить максимум выгоды от сотрудничества с нами!

## Перечень производителей, продукцию которых мы поставляем на российский рынок

Trade Electronics.ru

гарантия бесперебойности производства и  
качества выпускаемой продукции

С удовольствием будем прорабатывать для Вас поставки всех необходимых компонентов по текущим запросам для скорейшего выявления групп элементов, по которым сотрудничество именно с нашей компанией будет для Вас максимально выгодным!

С уважением,

Менеджер отдела продаж ООО

«Трейд Электроникс»

Шишлаков Евгений
