POWER MONITORING AND SWITCHING CONTROLLER FOR 3.3-V SRAM

FEATURES

- **Power Monitoring and Switching for Non-Volatile Control of SRAMs**
- **Input Decoder Allows Control of 1 or 2 Banks of SRAM**
- **Write-Protect Control**
- **3-V Primary Cell Input**
- **3.3-V Operation**
- **Reset Output for System Power-On Reset**
- **Less than 20-ns Chip Enable Propagation Delay**
- **Small 16-Lead TSSOP Package**

APPLICATIONS

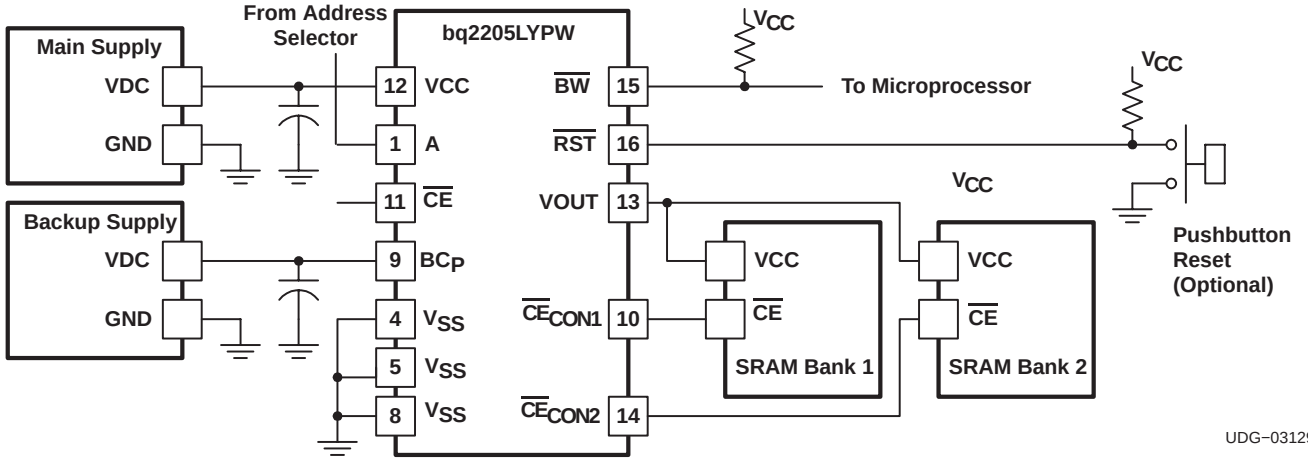
- **NVSRAM Modules**
- **Point-of-Sale Systems**
- **Facsimile, Printers and Photocopiers**
- **Internet Appliances**
- **Servers**
- **Medical Instrumentation and Industrial Products**

DESCRIPTION

The CMOS bq2205 SRAM non-volatile controller with reset provides all the necessary functions for converting one or two banks of standard CMOS SRAM into non-volatile read/write memory.

A precision comparator monitors the 3.3-V VCC input for an out-of-tolerance condition. When out-of-tolerance is detected, the two conditioned chip-enable outputs are forced inactive to write-protect both banks of SRAM.

Power for the external SRAMs, VOUT, is switched from the VCC supply to the battery-backup supply as VCC decays. On a subsequent power-up, the VOUT supply is automatically switched from the backup supply to the VCC supply. The external SRAMs are write-protected until a power-valid condition exists. The reset output provides power-fail and power-on resets for the system. During power-valid operation, the input decoder, A, selects one of two banks of SRAM.



Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

ORDERING INFORMATION

T_A	OPERATION	PART NUMBER(1)	SYMBOL
−20°C to 70°C	3.3 V	bq2205LYPW	bq2205LY

(1) The PW package is available taped and reeled. Add an R suffix to the device type (i.e. bq2205LYPWR) to order quantities of 2,000 devices per reel.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range unless otherwise noted(2)

		bq2205LY	UNIT
Input voltage range	V_{CC}, (wrt V_{SS})	−0.3 to 6.0	V
	BC_P, (wrt V_{SS})	−0.3 to 4.5	
	all other pins, (wrt V_{SS})	−0.3 to VCC + 0.3	
Operating temperature range, T_A		−20 to 70	°C
Storage temperature, T_{stg}		−55 to 125	
Temperature under bias, T_{Jbias}		−40 to 85	
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds		300	

(2) Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

RECOMMENDED OPERATING CONDITIONS

	MIN	MAX	UNIT
Supply voltage, V_{CC}	3.0	3.6	V
Supply voltage from backup cell, V_{BC}	2.0	4.0	
Low-level input voltage, V_{IL}	−0.3	0.8	
High-level input voltage, V_{IH}	2.2	V_{CC} + 0.3	
$\overline{RST}$ low-level input voltage, V_{IL}	−0.3	0.4	
$\overline{RST}$ high-level input voltage, V_{IH}	2.2	V_{CC} + 0.3	
Operating temperature range, T_A	−20	70	°C

ELECTRICAL CHARACTERISTICS

(T_A = 25°C, $V_{CC(min)} \le V_{CC} \le V_{CC(max)}$ unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT

N/C no connection

FUNCTIONAL DESCRIPTION

Two banks of CMOS static RAM can be battery-backed using the VOUT and conditioned chip-enable output pins from the bq2205. As the voltage input VCC slews down during a power failure, the two-conditioned chip enable outputs, $\overline{CE}_{CON1}$ and $\overline{CE}_{CON2}$, are forced inactive independent of the chip enable input, $\overline{CE}$. This activity unconditionally write-protects the external SRAM as VCC falls to an out-of-tolerance threshold V_{PFD}. As the supply continues to fall past V_{PFD}, an internal switching device forces VOUT to the backup energy source. $\overline{CE}_{CON1}$ and $\overline{CE}_{CON2}$ are held high by the VOUT energy source.

During power-up, VOUT is switched back to the 3.3-V supply as VCC rises above the backup cell input voltage sourcing VOUT. Outputs $\overline{CE}_{CON1}$ and $\overline{CE}_{CON2}$ are held inactive for time t_{CER} after the power supply has reached V_{PFD}, independent of the $\overline{CE}$ input, to allow for processor stabilization.

During power-valid operation, the $\overline{CE}$ input is passed through to one of the two $\overline{CE}_{CONx}$ outputs with a propagation delay of less than t_{CED}. The $\overline{CE}$ input is output on one of the two $\overline{CE}_{CONx}$ output pins; depending on the level of bank select input A. See truth table below.

Table 1. Truth Table

INPUT		OUTPUT	
$\overline{CE}$	A	$\overline{CE}_{CON1}$	$\overline{CE}_{CON2}$
H	x	H	H
L	L	L	H
L	H	H	L

Bank select input A is usually tied to a high-order address pin so that a large nonvolatile memory can be designed using lower-density memory devices. Non-volatility and decoding are achieved by hardware hookup as shown in the application diagram.

The $\overline{RST}$ output can be used as the power-on reset for a microprocessor. Access to the external RAM may begin when $\overline{RST}$ returns inactive.

BATTERY BACKUP INPUT

Backup energy source, BC_P, input is provided on the bq2205 for use with an external primary cell. The primary cell input is designed to accept any 3-V primary battery (non-rechargeable), typically some type of lithium chemistry.

Power-Down and Power-Up Cycle

The bq2205 continuously monitors VCC for out-of-tolerance. During a power failure, when VCC falls below V_{PFD}, the bq2205 write-protects the external SRAM. The power source is switched to BC_P when V_{CC} is less than V_{PFD} and BC_P is greater than V_{PFD}, or when V_{CC} is less than BC_P and BC_P is less than V_{PFD}. When VCC is above V_{PFD}, the power source is V_{CC}. Write-protection continues for t_{CER} time after VCC rises above V_{PFD}.

An external CMOS static RAM is battery-backed using the VOUT and chip enable output pins from the bq2205. As the voltage input V_{CC} slews down during a power failure, the chip enable output, $\overline{CE}_{CONx}$, is forced inactive independent of the chip enable input $\overline{CE}$.

As the supply continues to fall past V_{PFD}, an internal switching device forces VOUT to the external backup energy source. $\overline{CE}_{CONx}$ is held high by the VOUT energy source.

FUNCTIONAL DESCRIPTION

During power up, VOUT is switched back to the main supply as VCC rises above the backup cell input voltage sourcing VOUT. If $V_{PFD} < BC_P$ on the bq2205 the switch to the main supply occurs at V_{PFD}. $\overline{CE}_{CONx}$ is held inactive for time t_{CER} after the power supply has reached V_{PFD}, independent of the $\overline{CE}$ input, to allow for processor stabilization.

Power-On Reset

The bq2205 provides a power-on reset, which pulls the $\overline{RST}$ pin low on power down and remains low on power up for t_{RST} after V_{CC} passes V_{PFD}. With valid battery voltage on BC_P, $\overline{RST}$ remains valid for $V_{CC} = V_{SS}$. The pull-up resistor on this pin should not exceed 10 kΩ if a push button reset is used.

Battery Low Warning

The bq2205 checks the battery voltage on power-up. The threshold for the battery warning comparator is V_{BW}, and a low level is sensed after power valid on each power up and latched after t_{CER} time. The latched value is presented at $\overline{BW}$ pin where a low indicates a low battery.

APPLICATION INFORMATION

PCB LAYOUT INFORMATION

It is important to pay special attention to the PCB layout. The following provides some guidelines:

- To obtain optimal performance, the decoupling capacitor from input terminals to V_{SS} should be placed as close as possible to the bq2205, with short trace runs to both signal and V_{SS} pins.
- All low-current V_{SS} connections should be kept separate from the high-current paths from the inputs supplies. Use a single-point ground technique incorporating both the small signal ground path and the power ground path.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Publication IPC–7351 is recommended for alternate designs.
D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC–7525 for other stencil recommendations.
E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46C and to discontinue any product or service per JESD48B. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.

TradeElectronics.ru

гарантия бесперебойности производства и качества выпускаемой продукции

О компании

ООО "ТрейдЭлектроникс" - это оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов. Реализуемая нашей компанией продукция насчитывает более полумиллиона наименований.

Благодаря этому наша компания предлагает к поставке практически не ограниченный ассортимент компонентов как оптовыми, мелкооптовыми партиями, так и в розницу.

Наличие собственной эффективной системы логистики обеспечивает надежную поставку продукции по конкурентным ценам в точно указанные сроки.

Срок поставки со стоков в **Европе и Америке – от 3 до 14 дней.**

Срок поставки из **Азии – от 10 дней.**

Благодаря развитой сети поставщиков, помогаем в поиске и приобретении экзотичных или снятых с производства компонентов.

Предоставляем спец цены на элементы для создания инженерных сэмплов.

Упорный труд, качественный результат дают нам право быть уверенными в себе и надежными для наших клиентов.

Наша компания это:

- Гарантия качества поставляемой продукции
- Широкий ассортимент
- Минимальные сроки поставок
- Техническая поддержка
- Подбор комплектации
- Индивидуальный подход
- Гибкое ценообразование

Наша организация особенно сильна в поставках модулей, микросхем, пассивных компонентов, ксайленсах (XC), EPF, EPM и силовой электроники.

Большой выбор предлагаемой продукции, различные виды оплаты и доставки, позволят Вам сэкономить время и получить максимум выгоды от сотрудничества с нами!

Trade Electronics.ru

гарантия бесперебойности производства и качества выпускаемой продукции

Перечень производителей, продукцию которых мы поставляем на российский рынок

Trade Electronics.ru

гарантия бесперебойности производства и качества выпускаемой продукции

С удовольствием будем прорабатывать для Вас поставки всех необходимых компонентов по текущим запросам для скорейшего выявления групп элементов, по которым сотрудничество именно с нашей компанией будет для Вас максимально выгодным!

С уважением,

Менеджер отдела продаж ООО

«Трейд Электроникс»
