Description

The L4940 series of three terminal positive regulators is available in TO-220, TO-220FP and D²PAK packages and with several fixed output voltages, making it useful in a wide range of industrial and consumer applications. Thanks to its very low input/output voltage drop, these devices are particularly suitable for batteries powered equipment, reducing consumption and prolonging battery life. Each type employs internal current limiting, antisaturation circuit, thermal shut-down and safe area protection.

Figure 28. Distributed supply with on-card L4940 and L4941 low drop regulator

Note: Advantages of these application are:
 On card regulation with short-circuit and thermal protection on each output.
 Very high total system efficiency due to the switching pre-regulation and very low-drop post-regulation.

Note: Advantages of this configuration are:

- Very high regulation (line and load) on both the output voltage.
- 12 V output short circuit and thermally protected.
- Very high efficiency on the 12 V output due to the low drop regulator.
